OPTIONAL PROCEDURE	

DEPARTURE BRIEFING – OPTIONAL	+9 Minutes
READY FOR THE TAKEOFF BRIEF?	YES
OK, I will be the pilot flying	
We have no MEL issues today	
This will be a standard takeoff, noise abatement departure procedure <XXX>	
The departure will be via <TYPE> <NAME>	
Our take off thrust is <THRUST SETTING>	
We will use Flaps <FLAP SETTING> for takeoff	
Runway condition is <CONDITION>	
Anti Ice is <ANTI ICE SETTING>	
Bleeds will be <BLEED SETTINGS>	
In case of forced return we are <UNDER/OVERWEIGHT>	
For the takeoff safety brief	
From 0 to 100 knots for any malfunction I will call reject and we will confirm the autobrakes are operating	
If not operating I will apply maximum manual breaking and maximum symmetric reverse thrust and come to a full stop on the runway	
After full stop on the runway we decide on course of further actions	
From 100 knots to V 1 I will reject only for one of the following reasons, engine fire, engine failure or takeoff configuration warning horn	
At and above V 1 we will continue into the air and the only actions for you below 400 feet are to silence any alarm bells and confirm any failures	
Above 400 feet I will call for failure action drills as required and you'll perform memory items	
at 800 feet above field elevation I will call for altitude hold and we will retract the flaps on schedule	
At 1500 feet I will call for the checklist	
If we are above maximum landing weight we will make decision on whether to perform an overweight landing if the situation requires	
If we have a wheel well, engine or wing fire, I will turn the aircraft in such a way the flames will be downwind and we will evacuate through the upwind side	
If we have a cargo fire you need to ensure emergency services do not open the cargo doors until evac is completed
